(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 790 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 790 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

DETAILED ACTION

Allowable Subject Matter

Claims 1-4, 6-20, 22-27, 30, 32, and 33 are allowed.

The following is an examiner's statement of reasons for allowance:

Initially, the amendments to claims 1, 2, 18, and 19 overcome the rejections made in the previous Office Action under 35 U.S.C. 112, 2nd paragraph. The rejections under 35 U.S.C. 112, 2nd paragraph are withdrawn.

Independent claims 1, 2, 18, 19, and 27 each require the average gain factor applied to the input signal is such that the average gain signal is less than 3dB. As indicated in the previous Office Action, Goldstein discloses the average gain factor in the preferred range of the invention is around 20 dB (see Fig. 7, at the preferred compression ratio range of -5 dB to 5 dB, the RMS gain is approximately 20 dB). Similarly, Allen et al. disclose a maximum gain factor limit of 15 dB (column 7, lines 10-12). There is no teaching or suggestion in Goldstein or Allen et al. to limit the average gain factor so that the average gain factor for the first and second ranges is less than 3 dB.

Regarding claim 32, Goldstein does not disclose or suggest a determinator for determining a maximum level of input and equating the maximum input level with the upper edge of the first range. Allen et al. disclose determining a maximum level of input, but suggest that the upper edge of a first range should be set so that the upper level is exceeded 10% of the time (thus the upper edge is lower than the maximum input level, see column 8, lines 29-31).

Regarding claim 33, Goldstein discloses (Fig. 5) that the gain function remains at 20 dB below 60 dB SPL. Similarly, Allen et al. disclose the gain function remains linear at a level GL below a particular breakpoint level BK (see Fig. 5 and column 8, lines 12-34). There is no suggestion in Goldstein Allen et al. to include a fourth range juxtaposed at a lower boundary value to the second range where the gain factor in the fourth range is substantially zero.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to BRIAN L. ALBERTALLI whose telephone number is (571)272-7616. The examiner can normally be reached on Monday-Thursday, 8 AM to 6:30 PM.
